Institution: Christ University Kengeri

Date of Submission: 10.03.2026

Abstract

The Task Management Tracker is a web-based application developed to help users organize, manage, and track their daily tasks efficiently. The system allows users to create tasks, assign priorities, set due dates, and monitor the completion status of each task. It provides a simple and user-friendly interface that enables users to easily add, edit, and delete tasks while keeping track of their progress.

The application is developed using HTML, CSS, and JavaScript, which provide the structure, styling, and functionality of the system. Tasks are displayed in an organized format, allowing users to clearly view pending and completed tasks. The system also includes features such as priority selection and task completion tracking to improve productivity and task management.

Objectives

- Provide an easy task management system
- Allow users to create and manage tasks
- Enable priority-based task organization
- Track task completion status
- Improve productivity and organization

Scope of the Project

- Provides a web-based platform to manage daily tasks.
- Allows users to add new tasks with details.
- Enables editing and deleting of existing tasks.
- Supports setting task priority (High, Medium, Low).
- Allows users to assign due dates for tasks.
- Provides option to mark tasks as completed.
- Displays tasks in an organized and easy-to-read format.
- Helps users track pending and completed tasks.
- Improves productivity and task organization.

Tools & Technologies Used

Tool/Technology	Purpose
HTML5	content structure
CSS3	Styling, layout, responsiveness
JavaScript	Application logic and intraction
Web Browser	Running the application

HTML Structure Overview

- HTML forms the basic structure of the Task Management Tracker application.
- It defines the layout of the web page including header, task input form, and task list section.
- Contains input fields for task title, description, priority, and due date.
- Provides buttons for adding, editing, and deleting tasks.
- Displays tasks in an organized task list or card format.

CSS Styling Strategy

- CSS is used to design and style the user interface of the application.
- Provides styling for the task input form and buttons.
- Defines layout, spacing, and alignment of elements.
- Styles task cards for better readability.
- Uses colors and visual elements to highlight task priorities.
- Improves the overall appearance and user experience.
- Ensures the interface is clean, organized, and easy to use.

Key Features

- CSS is used to design and style the user interface of the application.
- Provides styling for the task input form and buttons.
- Defines layout, spacing, and alignment of elements.
- Styles task cards for better readability.
- Uses colors and visual elements to highlight task priorities.
- Improves the overall appearance and user experience.
- Ensures the interface is clean, organized, and easy to use.

Challenges Faced & Solutions

Challenge	Solution
Dynamic task updates	Used JavaScript functions.
Task organization	Implemented CSS task cards.
Completed task tracking	Added separate section.
User interaction	Designed simple input forms.
Priority display	Priority display – Added priority labels.
Clean interface	Applied structured CSS styling.

Outcome

- Improved task organization

- Easy task tracking system
- Efficient deadline management
- Better productivity support

Future Enhancements

- User authentication system
- Cloud database integration
- Mobile application version
- Task reminder notifications

Sample Code

HTML

```
<div class="task-input">

  <input type="text" id="taskTitle" placeholder="Enter task title">

  <select id="priority">

    <option value="High">High</option>

    <option value="Medium">Medium</option>

    <option value="Low">Low</option>

  </select>

  <input type="date" id="dueDate">

  <button onclick="addTask()">Add Task</button>

</div>

<div id="taskList"></div>
```

CSS

```
body {

  font-family: Arial, sans-serif;

  background-color: #f4f4f4;
```

```
}

.task-card {
   background: white;
   padding: 15px;
   margin: 10px;
   border-radius: 5px;
   box-shadow: 0 2px 5px rgba(0,0,0,0.1);
}

button {
   padding: 8px 12px;
   background-color: #4CAF50;
   color: white;
   border: none;
   cursor: pointer;
}
```

Code Explanation

HTML

- HTML is used to create the basic structure of the application.
- It defines the layout of the page including the task input form and task list section.
- Input fields allow users to enter task title, priority, and due date.
- Buttons are used for actions such as adding, editing, and deleting tasks.

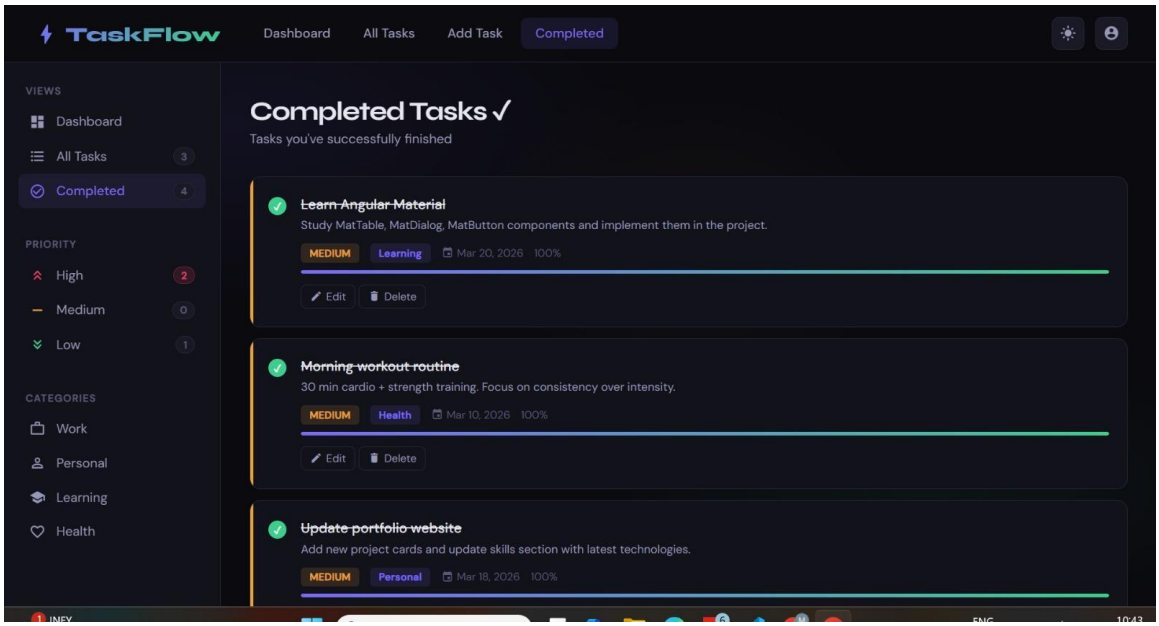
CSS

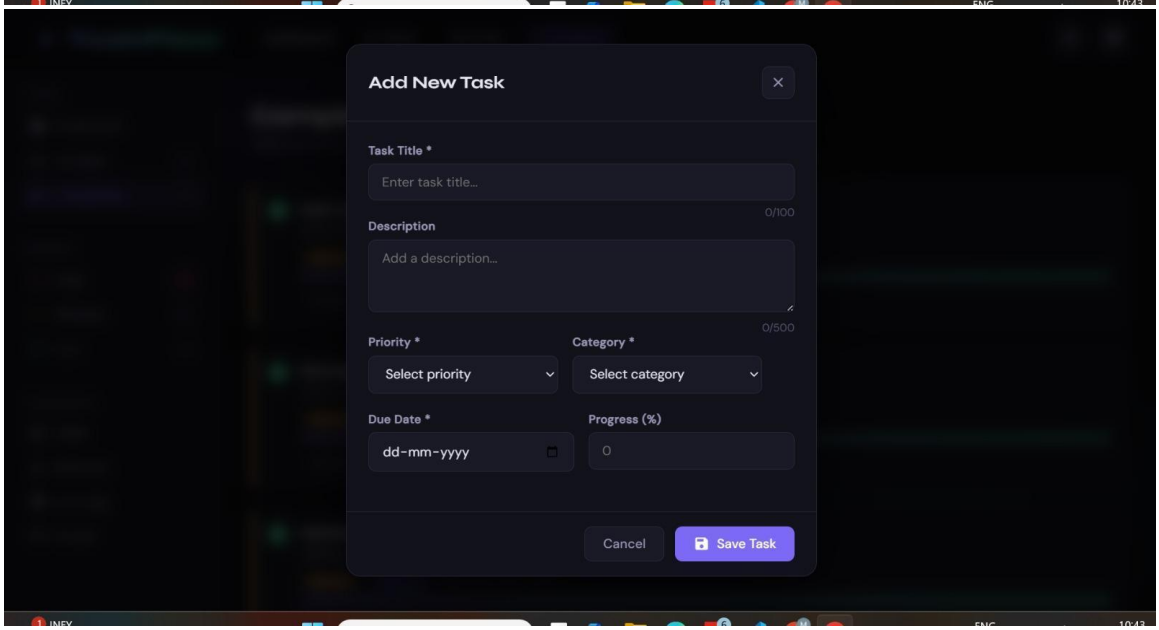
- CSS is used to style the user interface of the application.
- It defines the layout, colors, spacing, and alignment of elements.
- Task cards and buttons are styled to make the interface clean and readable.
- CSS improves the overall appearance and user experience.

JavaScript

- JavaScript provides the functionality of the application.
- It allows users to add new tasks dynamically.
- It enables editing and deleting of tasks.
- It handles marking tasks as completed.
- It updates the task list without refreshing the page.

Screenshots of Final Output





Conclusion

The Task Management Tracker successfully provides a simple and effective way to manage daily tasks. It helps users organize their work, track progress, and maintain productivity.
